**New Question** You have an on premises Active Directory forest and an Azure Active Directory (Azure AD) tenant. All Azure AD users are assigned a Premium P1 license. You deploy Azure AD Connect. Which two features are available in this environment that can reduce operational overhead to your company's help desk? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.  
A. self-service password reset  
B. access review  
C. password writeback  
D. Azure AD Privileged Identity Management policies  
E. Microsoft Cloud App Security Conditional Access App Control  
**Answer: AD**

**New Question** You are planning to deploy an application by using the Azure Kubernetes Services (AKS). The application will rely on having access to an encryption key that will be used to ... transmit files. What should you use to provide the encryption key for AKS security?  
A. secrets  
B. Azure Storage Service Encryption  
C. a Kubernetes deployment YAML file  
D. ConfigureMap  
**Answer: C**

**New Question** You store web access logs data in Azure Blob storage. You plan to generate monthly reports from the access logs. You need to recommend an automated process to upload the data to Azure SQL Database every month. What should you include in the recommendation?  
A. Microsoft SQL Server Migration Assistant (SSMA)  
B. Azure Data Factory  
C. Data Migration Assistant  
D. AzCopy  
**Answer: C**

**New Question** Your development team plans to use an Azure subscription to test new applications. The application will reside on Azure virtual machines. The developers will be responsible for managing the subscription. Shared resources will be used by more than one application. You need to recommend a deployment solution that meets the following requirements: Minimize administration effort for the developers. Ensures that the testing environment can be recreated consistently. Ensures that the testing cycle is complete, all the resources, except for the shared resources associated to each application, are deleted. What should you include in the recommendation?  
A. Use JSON templates to create the resources. Place the shared resources in one resource group, the application-specific resources in separate resource groups.  
B. Use JSON templates to create the resources. Place the shared resources in one resource group. Place all the application-specific resources in a second resource group.  
C. Use an Azure PowerShell script to create the resources. Place the shared resources and the application-specific resources in the same resource group.  
D. Use an Azure PowerShell script to create the resources. Place the shared resources in one resource group. Place the application-specific resources in separate resource groups.  
**Answer: B**

**New Question** You plan to deploy an API by using Azure API Management. You need to recommend a solution to protect the API from a distributed denial of service (DDoS) attack. What should you recommend?  
A. Create network security groups (NSG)  
B. Enable rate limiting  
C. Strip the Power-By response header  
D. Enable quotas.  
**Answer: A**

**New Question** You plan to deploy 200 Microsoft SQL Server databases to Azure by using SQL Database and Azure SQL Database Managed Instance. You need to recommend a monitoring solution that provides a consistent monitoring approach for all deployments. The solution must meet the following requirements: Support current-state analysis on metrics collected near real-time, multiple times per minute, and maintained for up to one hour. Support longer term analysis based on metrics collected multiple times per hour and maintained for up to two weeks. Support monitoring of the number of concurrent logins and concurrent sessions. What should you include in the recommendation?  
A. Azure Monitor  
B. dynamic management views  
C. SQL Server-Profiler  
D. trace flags  
**Answer: D** !!!RECOMMEND!!!
