QUESTION 12 The top-level domain of www.adventureworks.com is: A. www B. adventureworks C. adventureworks.com D. com
Answer: D
Explanation: A top-level domain (TLD) is one of the domains at the highest level in the hierarchical Domain Name System of the Internet.

QUESTION 13 At what layer in the OSI model are hardware addresses referenced? A. Network B. Application C. Data link D. Physical
Answer: C
Explanation: You need to divide a network into three subnets. Which device should you use? A. Hub B. Bridge C. Router D. Segmenter
Answer: C
Explanation: You can use a router to divide your network into subnets.

QUESTION 15 The type of connector used on a 100BaseT Ethernet cable is: A. RJ-11 B. RJ-45 C. TNC D. BNC
Answer: B

QUESTION 16 In addition to switching, multilayer switches also: A. Provide Layer 3 routing functions B. Interface with CAT3, CAT5, CAT5e, and fiber optics C. Support 10 MB, 100 MB, and 1 GB local area network (LAN) ports D. Operate by using only Layer 1 and 2 protocols
Answer: A
Explanation: A multilayer switch (MLS) is a computer networking device that switches on OSI layer 2 like an ordinary network switch and provides extra functions on higher OSI layers. The major difference between the packet switching operation of a router and that of a Layer 3 switch is the physical implementation. In general-purpose routers, packet switching takes place using software that runs on a microprocessor, whereas a Layer 3 switch performs this using dedicated application-specific integrated circuit (ASIC) hardware.

QUESTION 18 To directly connect the Ethernet network interface cards (NICs) of two computers, you should use a: A. Crossover cable B. Straight cable C. Rollover cable D. Coaxial cable
Answer: A
Explanation: An Ethernet crossover cable is a type of Ethernet cable used to connect computing devices together directly. Normal straight through cables were used to connect from a host network interface controller (a computer or similar device) to a network switch, hub or router.

QUESTION 19 The function of a router is to: A. Provide IP subnet masks for hosts B. Forward traffic to other networks C. Broadcast routing tables to clients D. Store tables for name resolution
Answer: B
Explanation: A router is a device that forwards data packets along networks. A router is connected to at least two networks, commonly two LANs or WANs or a LAN and its ISP's network. Routers are located at gateways, the places where two or more networks connect.

QUESTION 20 If a router cannot determine the next hop for a packet, the router will: A. Forward the packet to the default route B. Send the packet back to the packet's source C. Broadcast the packet D. Store the packet in the memory buffer
Answer: A
Explanation: If there is no next hop, the packets are not policy routed. A default route of a computer that is participating in computer networking is the packet forwarding rule (route) taking effect when no other route can be determined for a given Internet Protocol (IP) destination address.

QUESTION 21 In which physical network topology is each computer connected to a central point? A. Star B. Mesh C. Ring D. Bus
Answer: A
Explanation: In local area networks with a star topology, each network host is connected to a central hub with a point-to-point connection.

QUESTION 22 Which two of the following are connectivity options for wide area networks (WANs)? (Choose two.) A. Token ring B. Ethernet C. Dial-up D. Leased line
Answer: C
Explanation: Token ring and Ethernet are used in LANs.
